Subject: Approval Notification Mirachem 500
Copy: [REDACTED]

Dear Mr. Ardelean,

Hyster was recently contacted by the Mirachem Company to review the use of their product Mirachem 500 as an alternative degreasing solvent in cleaning of the lift chains used on Hyster manufactured lift trucks. Currently Hyster service manuals recommend solvent to clean the chains to remove excess grease, deteriorated grease, or other particle debris which may have accumulated within the chain links and then dry by using compressed air. Chains should then be lubricated to prevent rusting.

After review of the product specifications as well as contacting the chain manufacturer we can find no issues with this product that would cause any adverse conditions if substituted for the normal petroleum based solvents and used according to the instructions outlined in the Hyster service manuals.

Sincerely,

Ryan McLawhorn
Quality Improvement Manager
Hyster Company
